

Thamesway Meet the President and Welcome to New Members and Fellows - Wednesday 15th February 6.30pm

7.15pm Technical Lecture - 'A Robotic Menagerie' by Dr Rob Siddall, University of Surrey

[Dr Rob Siddall](#) is an aerospace engineer and roboticist who develops robots that can tackle the most challenging terrain. This has included an aquatic aircraft, a robotic flying gecko and a fish that collects microplastics. Through these designs he will show how robotics can be used as a tool to further understand biology and ultimately build better robots. He will also consider how biomechanics and robotics can provide an entry point into engineering for young people with an interest in science.
